### **DETAILED ACTION**

Applicants' Amendment and Response has been reviewed. The abstract is amended.

Claims 1-40 are pending.

1. Applicants' Amendment and Response is considered persuasive. However, this second non-final action on the merits issues pursuant to new grounds of rejection.

### ***Claim Objections***

2. Claims 1-40 are objected to because of the following informalities: The claims reference "transmitting/receiving", "to/from"; Applicants must clearly define which one applies. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

### **Rejection of claims 1-40**

4. Claims 1-40 are rejected under 35 U.S.C. 102(e) as being anticipated by Marantz et al. (Marantz)(U.S. Patent 6,061,511).
5. Pursuant to claim 1, 17, 32, and 40, Marantz discloses an emulator (c1, c17) and method (c32) for verifying a logic design of a target chip (col. 27-30), comprising a processing engine for executing a software algorithm (col. 2, ll. 31-40) corresponding to

Art Unit: 2825

the logic design of the target chip (col. 3, ll. 55-63); a target interface engine interfacing with said target system (col. 4, ll. 13-25) for transmitting/receiving pin signals to/from said target system in response to the execution of said software algorithm, wherein the software variable and the pin signals are time-variant and the processing engine includes means for finding correspondence between said software variable and said pin signals at a predetermined time (col. 3, line 55 to col. 4, line 12; col. 5, line 53 to col. 6, line 4).

6. Pursuant to claims 2 and 18 wherein the target interface engine comprises a pin signal generator for generating pin signals to be transmitted to said target system and receiving pin signals from said target system; and a pin signal monitor for receiving and storing said pin signals communicated between said pin signal generator and said target system (col. 6, ll. 5-30).

7. Pursuant to claims 3 and 19 wherein the pin signal monitor store time information associated with the pin signals (col. 6, ll. 5-30).

8. Pursuant to claim 4 and 20, wherein the pin signal monitor comprises a trigger event (col. 6, ll. 53-67).

9. Pursuant to claim 5 and 21, wherein said trigger event comprises means for transmitting a first interrupt request (col. 8, ll. 4-28).

10. Pursuant to dependent claims 6-16, 22-31 and 33-39, the limitations of these claims are likewise anticipated by Marantz.

***Conclusion***
